### Beskrivelse

The new MK17 EVØ SCUBAPRO's premium high performance balanced diaphragm first stage. Engineered for harsh environments, its internal components are completely sealed off from the elements so neither salt water nor sand can foul the mechanism. This total sealing system also allows for chrome-plated marine grade brass body to foul the mechanism. This total sealing system also allows for better protection and improves performance, ensuring trouble-free operation even when the water gets cold. This new version is more compact than its predecessor yet delivers better breathing performance. The new design allows more airflow from the LP ports which have also been configured for optimum hose routing.
